

# **Mail.XML 12.0A Technical Specification**

**MID-CRID**

**November 13, 2015**

**Prepared by  
United States Postal Service**

**Release Version Support**

This document contains information pertaining to Mail.XML release version 12.0A and the following USPS *PostalOne!* Releases:

- Release 40 January 2015
- Release 41 April 2015
- Release 42 January 2016

**Technical Support from the USPS Help Desk and Tier 2 Support:**

The USPS provides Mail.XML technical support for mailers/vendors and support is only specific to the business rules it pertains to implementation of business transactions, error codes/descriptions and exception handling with the Mail.XML implementations.

The USPS does not provide nor is it equipped to provide technical support for software development tools or IDEs (Integrated Development Environments) like Visual Studio, and software development related activities as they pertain to different technology specific programming environments for different companies, such as .Net, Java, Visual Basic, Power Builder, C, C++ etc.

The Mailer/Vendor is responsible for obtaining technical support and assistance directly from the IDE vendor such as Microsoft, IBM or Sun/Oracle for software development related help needs.

**Trademarks**

The following trademarks are owned by the United States Postal Service:

ACS™, CASS™, CASS Certified™, Certified Mail™, DMM®, FAST®, First-Class™, First-Class Mail®, Full-Service ACS™, IM®, IMb™, IMb Tracing™, Intelligent Mail®, OneCode ACS®, OneCode Solution®, PLANET Code®, *PostalOne!*®, POSTNET™, Postal Service™, Priority Mail®, Registered Mail™, RIBBS™, Standard Mail®, The Postal Service®, United States Postal Service®, USPS®, USPS.COM®, ZIP®, ZIP Code™, ZIP + 4® and ZIP+4™.

IDEAlliance and Mail.dat are registered trademarks of the International Digital Enterprise Alliance, Inc. (IDEAlliance).

Sun, Sun Microsystems, and Java are trademarks or registered trademarks of Sun Microsystems, Inc.

Microsoft, Microsoft Windows, and Microsoft Internet Explorer are registered trademarks of Microsoft Corporation.

All other trademarks used are the property of their respective owners.

## DOCUMENT CHANGE HISTORY

The Change History Archive can be found in Section 8.

### Changes for Mail.XML MID-CRID-12.0A-R21 Edition 1 Change 0

Date	Section #	Title	Description
11/3/15	Various	N/A	Updated footer, TOC, & cover page to reflect initial publication date and edition for Release 42.0.
11/3/15	1.5	Roadmap of Mail.XML	Updated for January 2016 version support.

# 1. Postal Service Mail.XML

## 1.1 Overview

The document describes the Mail.XML messages that can be used to apply for Mailer IDs (MIDs) or Customer Registration IDs (CRIDs) electronically for mailers and mail owners.

## 1.2 Purpose

The purpose of this Technical MID/CRID document is to supplement the Postal service Mail.XML technical guide for Data Distribution and profiles, so that specific focus can be given to the MID and CRID application process.

### 1.2.1 Document Scope

This document is divided into following sections:

- Section 1.0 provides an overview of the Mail.XML and also states the purpose of this document.
- Section 2.0 provides an overview of the Profile Management functionalities for MID and CRID application
- Section 3.0 provides an overview of MID and CRID Mail.XML messages
- Section 4.0: This section provides technical information (Data Structure and Business Rules) for all messages supported in 12.0A specifications.
- Section 5.0: This section provides technical information on the complex types and attribute definitions for Mail.XML Profiles Management.
- Section 6.0: This section provides technical information on the simple types data structure for Mail.XML Profiles Management.
- Section 7.0: This section provides information on the Web Service Description Language (WSDL) for Mail.XML Profiles Management.

## 1.3 Audience

The audiences for this document are technical programmers and technical managers who have prior knowledge of XML language and Mail.dat. The majority of codes used in the Mail.XML base XSD come from the Postal Service Mail.dat specification, which describes the flags used by IDEAlliance.

## 1.4 Mail.XML

Mail.XML™ is an XML-based IDEAlliance® ([IDEAlliance Mail.XML](#)) specification for web services supporting the Services Oriented Architecture (SOA) that is conversational in nature and platform independent. Web Services uses simple HTTP(s) protocol to communicate data over the Internet, thereby bypassing technology-specific restrictions and avoiding network-related security rules. Sound implementations of web services provide safe, secure, platform-independent, support near real-time communication, and increase the efficiency of conducting business in most business environments.

More importantly, the Mail.XML allows business function-specific communication and faster change management processes with no impact to other service providers/mailing environments within the mailing industry (optional fields can be added or new messages without requiring software in the mailing supply chain to change), which has been a core improvement area for the Mail.dat® specification. Mail.XML is a complement to Mail.dat, customers using Mail.dat can continue to use it as a database, but can use Mail.XML for communication, automation of business to business processing, and getting answers in near real time from their business partners including the USPS.

The Mail.XML 12.0A functionality provides four major business functions: eDoc messages, data distribution messages, profile management messages, and FAST scheduling messages. The focus of this document is profile management messages. These Mail.XML-based business functions surpass any functionality available today through any data interface with the USPS®. The IDEAlliance Mail.XML version 12.0A specification is composed of families of related messages that provide all the capability that Mail.dat specification provided, as well as business function support that Mail.dat did not provide. Business functions supported include ability to request data on Customer Registration ID (CRID), and Mailer ID (MID). The specification also provides the mailing industry with the ability to conduct many business functions through near real time communication mechanisms specifically to support joint scheduling and transportation management communications.

All business functions supported by the USPS as part of the Mail.XML implementation are based upon SOA. With this architecture, mailer's software manages the data transactions for query, create, update, and cancel business functions, as

well as subscription models. Additionally, the mailer's software is able to receive synchronous and asynchronous transactions through Web Services protocol from the USPS in support of the just-in-time communication architecture.

## 1.5 Roadmap of Mail.XML

Table 1-1 contains a roadmap of releases and corresponding versions of Mail.XML for Profiles Management.

January 2015 Release 40.0	April 2015 Release 41.0	January 2016 Release 42.0
Mail.XML 12.0A	Mail.XML 12.0A	Mail.XML 12.0A
Mail.XML 12.0B	Mail.XML 12.0B	Mail.XML 12.0B
Mail.XML 14.0A	Mail.XML 14.0A	Mail.XML 14.0A
Mail.XML 16.0	Mail.XML 16.0	Mail.XML 16.0

**Table 1-1 Roadmap of Mail.XML supported version per release**

Table 1-2 lists the Mail.XML Profiles Management messages for MIDs and CRIDs by Mail.XML 12.0A.

Message Name	Supported in Mail.XML 12.0A
USPSCRIDCreateRequest	X
USPSCRIDCreateResponse	X
USPSMIDCreateRequest	X
USPSMIDCreateResponse	X

**Table 1-2 Profiles Management Messages List for Mail.XML 12.0A Version**

## 1.6 General XML and Web Services Information

XML stands for eXtensible Markup Language and it is designed to transport and store data. For general information on XML visit [XML Tutorial](#)

### XSD

An XSD is the XML Schema that describes the structure of an XML document. For general information on XSD please visit [XML Schema Tutorial](#)

### Web Service

Web Services is a feature that converts software into an Internet-based software and publishes its functions/message to the users of the Internet. For general information on Web Services please visit:

[Web Services Tutorial](#)

[WSDL Tutorial](#)

[SOAP Tutorial](#)

## 1.7 Environments Supported by USPS

The USPS supports two environments for electronic file submissions, the Testing Environment for Mailers (TEM) and the Production environment.

**TEM:** This environment is used for authorization for all mailers prior to moving into the Production environment. Mailers work with the help desk to start the approval process for their software, and will be approved, if appropriate, in the TEM environment prior to sending Mail.XML data transactions in the Production environment. The CRID and MID requests in the TEM environment utilize test data. Data entered for CRID and MID requests will impact the production data. Therefore it is requested that only a few CRID and a few MID requests be processed.

**Production environment:** This environment is used by all customers that have been approved in the TEM send transactions/messages.

## 1.8 PostalOne! WSDL Information

All web services transactions that are made with the USPS should comply with the WSDL specification that are posted on RIBBS® and can be downloaded from the following location: [Web Service Description Language \(WSDL\) Specification](#).

A web services request must include a valid and active USPS User ID and Password as defined in the UserAuthenticationInfo.xsd file that is provided as part of the WSDL downloadable files. A typical web service message construct is defined as follows:

```
<wsdl:message name="DeliveryApptContentUpdateRequest">
  <wsdl:part name="authInfo" element="auth:AuthenticationInfo"/>
  <wsdl:part name="apptContentUpdate" element="tns:apptContentUpdate"/>
</wsdl:message>
```

### XSD-typed WSDL:

```
<wsdl:message name="FullServiceStartTheClockQueryRequest">
  <wsdl:part element="uspsmxl:FullServiceStartTheClockQueryRequest"
    name="FullServiceStartTheClockQueryRequest"/>
</wsdl:message>
```

USPS will validate and authenticate the user information before processing the request. An error message will be returned in response to the web service request for invalid user information.

### Types of WSDLs

There are two types of WSDLs, the Message-Type WSDL and the String-Type WSDL. The USPS only supports the Message-Type WSDL. The following paragraphs describe the Message-Type WSDL types.

#### Consuming Message-Type WSDLs

The Message-Type eliminates the need to manually register each service and Message-Type. With this method, a customer can use an automated tool that can set up their environment without manually registering each service. However, this approach requires updates to WSDLs every time a new Mail.XML version is released. In other words, it is tightly coupled with the Mail.XML Specification Version. The USPS has transitioned to this type of Message WSDLs to remove manual editing and registering of messages.

The customer must use a message-type URL to consume the services. These URLs are provided in the WSDLs and XSDs section of this document.

## 1.9 Profile Management

Profile Management provides the following features:

- Implementation of the new USPS.com Style Sheet
- The ability to apply a Data Distribution Profile to multiple MIDs
- The ability to delegate editing or adding a Full Service Address Change Service (ACS) billing profile to another Customer Registration Identification (CRID)
- The ability to set the default available MID count to 2 instead of 1
- A Mailer ID Tool (external facing pages) that assumes the style sheet of the USPS.com look and feel from the Phoenix project.
  - The ability to delegate a CRID to have the ability to edit or add a Full Service ACS billing profile. In that scheme, all MIDs linked to the CRID have the same Full Service ACS billing profile.
  - The ability for external users to manage their Data Distribution profiles in bulk.

In addition, once users submit a new or updated Data Distribution profile for a given CRID, the MID system prompts the users if they would like to apply the same Data Distribution profile information to other MIDs in their profile.

If a user chooses to apply the Data Distribution profile information to other MIDs to be the recipient of the new or edited Data Distribution profile, the MID system allows the user to select one or any combination of MIDs associated with the user's CRID.

The section for MID selection in the MID system allows the user to apply Data Distribution profile information (one or any combination) of MIDs associated with the user's CRID. The MID system also allows the user to select all MIDs.

The section for MID selection in the MID system contains the following fields:

- MID
- Customer Reference

### **MID Assignment**

External users are allowed to request two MIDs without the system performing volume checks. Users are also able to request additional MIDs above the volume allotment.

Mailing Agents (or other third party, Mail Services Providers (MSPs)) are allowed to request MIDs on behalf of their clients or mail owners.

Furthermore, the MID system allows a user to request up to two MIDs before verifying mailing volumes.

### **Impact Assessment**

The implementation of these features has increased the number of MIDs deployed to the Production environment. These features tremendously improved the user experience of external mailers handling hundreds of MIDs, and editing MID Data Distribution has become a streamlined process.

## 2. MID and CRID Application Process

This section covers the steps for the creation of CRIDs and MIDs.

**Note:** In order to use the USPS Web Services in the Production environment all users must first complete the testing in the USPS TEM environment.

**Note:** It is recommended that no more than 20 CRIDEntry elements be specified in the USPSCRIDCreateRequest message, and no more than 2 MIDEntry elements be specified in the USPSPIDCreateRequest message. If the systems are not able to process the request within ten (10) seconds, a fault response is returned to the user with a Tracking ID that the user can use to retrieve the response at a later time.

### 2.1 Requesting CRIDs using Mail.XML Web Services

This section covers the CRID request process using Mail.XML and mailers who wish to request for multiple CRIDs in one message.

**Note:** The MID and CRID Mail.XML requests are processed using the USPS production systems. Therefore, it is very important that the CRID and MID testing scenarios are successfully executed only one time. In order to avoid performance related issues, the Postal Service recommends that the CRID request sent in TEM or Production environment should have no more than twenty (20) CRID requests grouped in one message.

#### 2.1.1 Preconditions

1. Review the TEM approval guide “Full-Service Data Feedback Authorization Guide for Mail.XML” located at RIBBS. This guide covers testing scenarios for the CRID and MID generation. Users are required to fill out the Survey form to indicate that they wish to test CRID/MID functionality. Completing the survey forms will also initiate the process of mailer/user activation in the TEM (Test environment). Successful tests must be performed in the TEM environment in order to initiate activation in the Production environment.
2. When testing in the TEM environment, users should generate requests for CRIDs using test data. The CRIDs generated in the TEM environment are also transmitted to the Production environment. Company names that are made up and addresses that do not belong to that facility should be used as test data.  
**Note:** The addresses for the CRIDs are matched against the USPS Address Management System (AMS) Database; therefore, for the CRID request to work the addresses must be real addresses. When requesting CRIDs in the production environment, correct company names and correct corresponding addresses should be used.
3. When testing in TEM environment, send test data for the CRID generation requests. The company names and addresses used for testing should be fictitious. However, the CRIDs generated in the TEM environment are also transmitted to the Production environment and the addresses are matched against the USPS Address Management System Database (AMS) system. Therefore, for the CRID request to work in the Production environment the addresses must be real addresses.
4. The requester will need one CRID and a Business Customer Gateway account to send this request.
5. The CRIDs can be requested for one’s own organization, as well as, for a partner. The Mail.XML message requires the submitter to inform USPS if the request is “ApplyingForSelf” as a Yes or No indicator. Yes indicates the request is for one’s own organization, and No indicates the request is for one’s partner. If No is selected, the Mail.XML Legal Acknowledgement block becomes required and submitter/agent must provide the full legal acknowledgement statement as defined in the following sections.

#### 2.1.2 Process

This section provides an overview of the CRID request process. For detailed technical specifications and to identify the exact data format and elements for the required fields, please review the sections “Data Structure and Business Rules for Mail.XML”.

1. Compile the list of addresses for the CRID with the required information as provided in this guide. For more information please review the section Prerequisites above.
2. Convert the list into a verified form compatible with Mail.XML XSD.
3. It is highly recommended that the requester send only twenty (20) CRID addresses in one request. Multiple requests can be sent one after the other. For testing in the TEM environment we request that only one successful

CRID Create Request be processed, as the CRIDs get transmitted to the Production environment. As for production multiple CRID Create Requests can be sent as needed, with no more than twenty (20) CRID requests in each.

### 2.1.3 USPS CRID Create Request Overview

Please refer to the USPSCRIDCreateRequest section in this document for details on the required fields and the business logic. Table 2-1 contains a snapshot of this Mail.XML message; more details are listed in the following sections.

Field	Sub Field	Format	Required
SubmittingParty			Required for system
Submitting Software			Required for system
CRIDEntry			
	Company Name	String 40	Required
	Permit Publication Data		Optional
	Company HQ Indicator	Yes or No simple type	Optional
	Address		Required
	Address Match	Yes or No	Required
	Applying For Self	Yes or No	Required
	Legal Acknowledgement Block		Conditional; required if ApplyingForSelf is set to “No”

**Table 2-1 USPS CRID Create Request Overview**

## 2.2 Requesting MIDs using Mail.XML Web Services

This section covers the MID request process using Mail.XML. This section is written to support those mailers/users who wish to request many MIDs at the same time.

**Note:** In order to avoid performance related issues, the Postal Service recommends that the MID request sent in TEM or Production environment should have no more than two (2) MIDEntry requests grouped in one message.

### 2.2.1 Preconditions:

1. Review the TEM approval guide “Full-Service Data Feedback Authorization Guide for Mail.XML” located on RIBBS. This guide covers testing scenarios for the CRID and MID generation. Users are required to fill out the survey form to indicate that they wish to test CRID/MID functionality. Completing the survey forms will also initiate the process of mailer/user activation in the TEM (Test environment). Successful tests must be performed in the TEM environment in order to initiate activation in the Production environment.
2. When testing in the TEM environment, users should generate requests for MIDs using test data. The MIDs generated in the TEM environment are also transmitted to the production environment. Company names that are made up and addresses that do not belong to that facility should be used as test data.
3. Note that the addresses for the MIDs are matched against the USPS Address Management System (AMS) Database; therefore, for the MID request to work the addresses must be real addresses. When requesting MIDs in the production environment, correct company names and correct corresponding addresses should be used.
4. The requester will need one MID and a Business Customer Gateway account to send this request.
5. The MIDs can be requested for one’s own organization, as well as for a partner. The Mail.XML message requires the submitter to inform USPS if the request is “ApplyingForSelf” through the use of a Yes or No indicator. Yes indicates the request is for one’s own organization, and No indicates the request is for one’s partner. If No is selected, the Mail.XML Legal Acknowledgement block becomes required and submitter/agent must provide the full legal acknowledgement statement as defined in the following sections.

### 2.2.2 Process

This section covers an overview of the MID request process. For detailed technical specifications and to identify the exact data format of the required fields, please review the sections “Data Structure and Business Rules for Mail.XML”.

1. Compile the list of MID information and addresses with the required information as provided in this guide.

**Note:** In the TEM environment only dummy addresses and dummy company names must be used. You must not use real data in TEM as it will cause that data to be transmitted to the production CRID / MID system.

2. Convert the list into a verified form compatible with Mail.XML XSD.
3. It is highly recommended that the requester sends only two (2) MID addresses in one Mail.XML MID Create Request message. Multiple MID requests can be sent one after the other. For testing in the TEM environment USPS requests that only one successful MID Create Request be processed, as the MIDs get transmitted to the Production environment. In the Production environment, multiple MID Create Requests can be sent as needed, with no more than two (2) MID requests in each.

### 2.2.3 USPS MID Create Request (USPSMIDCreateRequest)

Please refer to the USPSMIDCreateRequest section in this document for details on the required fields and the business logic. Table 2-2 contains a snapshot of this Mail.XML message.

Field	Sub-Field	Format	Required
SubmittingParty			Required
SubmittingSoftware			Required
MIDEntry			Required
	CustomerCRID	CRIDType simple type	Required
	ApplyingForSelf	yesNo simple type	Required
	LegalAcknowledgment Block	legalAcknowledgementBloc kMIDType complex type	Conditional; required if ApplyingForSelf is set to "No"

**Table 2-2 USPS MID Create Request Overview**

### 3. MID and CRID Mail.XML Messages Overview

#### 3.1 Overview

As part of the Mail.XML 12.0A Web Services messages; USPS will allow mailers with the capability to manage their corporate identification.

Table 3-1 contains the list of messages supported in Mail.XML 12.0A Specification with the descriptions and details on each of these messages:

Message	Message Description
USPSMIDCreateRequest	This message will allow Mailers to request the <i>PostalOne!</i> System to create the Mailer ID (MID), if one already exists, USPS responds with the existing MID..
USPSMIDCreateResponse	This is a response message that notifies the requestor whether the request for creating the MID has been accepted or rejected. If the request is accepted then the MID will be sent back to mailer in the response message
USPSCRIDCreateRequest	This message will allow mailers to request the <i>PostalOne!</i> System to create the CRID for their corporation, if one already exists, USPS responds with the existing CRID.
USPSCRIDCreateResponse	This is a response message that informs the requestor whether the request for creating the CRID has been accepted or rejected. If the request is accepted then the CRID will be sent back to the mailer in the response message
IncentiveEnrollmentCreateRequest	This message will allow mailers to request the <i>PostalOne!</i> System to create an enrollment in the incentive program for themselves or their customers.
IncentiveEnrollmentCreateResponse	This is a response message that informs the requestor whether the request for enrolling in an incentive program has been accepted or rejected. If the request is accepted then the incentive enrollment data will be sent back to the mailer in the response message

**Table 3-1 MID and CRID Mail.XML Messages Overview**

#### 3.2 Profile Management Messages Workflow

All messages in Profile Management families follow a Pull method where user sends a request and expects to receive a response whether with the data or error/return code that is returned to the user.

There is no order by which user must request or send messages. User can request CRID or MID creation messages without any order.

#### 3.3 Exceptions

Table 3-2 contains the exceptions identified by USPS.

Mail.XML Version	Exception Description
12.0A	The customer should not zero pad their MID and CRID ID's

**Table 3-2 List of exceptions identified by USPS**

#### 3.4 Fault Codes

Faults, such as a message timeout or invalid XML are to be communicated using the fault element and returned within the detail section of the SOAP fault. The fault is made up of a tracking ID and one or more fault codes and optional fault descriptions. Note all of the Error/Return Codes listed below are supported in Mail.XML 12.0A

Table 3-3 contains the list of fault codes that are applicable to all Mail.XML messages, they are sent whenever a fault occurs in the transmission of the message.

Code	Description	Action*	Messages	Severity
401	Incomplete/Cannot Parse	Please submit the request again with well-formed XML according to XSD.	Fault (All Mail.XML Messages)	Error
402	Not Well Formed XML	Please submit the request again with well-formed XML according	Fault (All Mail.XML Messages)	Error

Code	Description	Action*	Messages	Severity
		to XSD		
403	Request XML is invalid against the XSDs	Please submit the request again with well-formed XML according to XSD.	Fault (All Mail.XML Messages)	Error
412	Invalid user	Please submit the request again with a valid user.	Fault (All Mail.XML Messages)	Error
440	Sorry - MailXML version is not supported	Please submit the request again with MailXML version supported by PostalOne Data Distribution System.	Fault (All Mail.XML Messages)	Error
500	Mail.XML generic internal error	Please contact PostalOne! Help Desk.	Fault (All Mail.XML Messages)	Error
501	MailXML request is missing 'SubmitterTrackingID' which is required for processing the Message	Please submit the request again with SubmitterTrackingID.	Fault (All Mail.XML Messages)	Error
502 <sup>1</sup>	Duplicate submitter ID. This Mail.XML request for Message #messageName# with SubmitterTrackingID #submitterTrackingID# was not processed by Mail.XML application because an identical request was received on #submitDate# and was assigned TrackingID of #trackingID#.	Please use the MRRR message with Tracking ID #trackingID# to retrieve.	Fault (All Mail.XML Messages)	Error
503	Not Implemented - MailXML message received is not supported	Please submit the request again with MailXML message supported by PostalOne Data Distribution System.	Fault (All Mail.XML Messages)	Error
505 <sup>1</sup>	Submitter tracking ID is too long	Please submit the request again with SubmitterTrackingID length not exceeding the length specified in the Tech Spec.	Fault (All Mail.XML Messages)	Error
1500	Invalid tracking ID	Please submit the request again with a valid Tracking ID.	Fault (All Mail.XML Messages)	Error
1502 <sup>2</sup>	Come Back Later	The response is not available at this time, Please try again later.	Fault (All Mail.XML Messages)	Warning
1502	Come Back Later	The response is not available at this time, Please try again later.	MessageResponseRetrievalResponse	Warning
1510	The TrackingID provided in the MessageResponseRetrievalResponse request was processed by Mail.XML application on #processedDate#. No response was received by Mail.XML from the target application.	Please submit the request again or contact PostalOne! Help Desk.	Fault (All Mail.XML Messages)	Information
1600	MRRR version not matching original request version.	Please submit the MRRR request again using the same MailXML version that was used to submit the original request.	Fault (All Mail.XML Messages)	Error
5101 <sup>3</sup>	Unauthorized - Required SubmittingParty information is empty or missing.	Please submit the request again with valid SubmittingParty block.	Fault (All Mail.XML Messages)	Error
5102 <sup>3</sup>	Unauthorized - User does not have access to specified SubmittingParty.	Please submit the request again with valid SubmittingParty block or contact PostalOne! Help	Fault (All Mail.XML Messages)	Error

Code	Description	Action*	Messages	Severity
5103 <sup>3</sup>	Unauthorized - User does not have access to 'Manage Mailing Activity' service.	Desk. Please contact PostalOne! Help Desk.	Fault (All Mail.XML Messages)	Error
<sup>1</sup> Error code 501 was used for any Submitter Tracking ID error. In Release 37, Error Codes 502 and 505 are used to enable distinction between Submitter tracking ID errors. <sup>2</sup> Error Code 500 was used for any generic error and Come Back Later faults. In Release 37, Error Code 1502 is used for any Come Back Later message for consistency. <sup>3</sup> Error Code 412 was used for any User Error. In Release 37, Error Codes 5101, 5102 and 5103 are used to enable distinction between user errors. * Action tags are only available for Mail.XML specs 14.0A and above.				

**Table 3-3 Fault Codes****3.5 MID and CRID Error/Return Codes**

Tables 3-4 and 3-5 contain the lists of the return codes that the *PostalOne!* system will communicate to the customer in response to the MID/CRID Create request messages to indicate the success or the failure of the request. These error/return codes are applicable to Mail.XML 12.0A.

Code	Description	Messages
5000	FULLSERVICE-EDOC: REQUEST SERVED SUCCESSFULLY.	USPSCRIDCreateResponse

## 4. Data Structure and Business Rules for Mail.XML 12.0A Specification

### Mail.XML 12.0A

The following section identifies the business rules and data structure for each of the MID and CRID messages that will be supported in the Mail.XML 12.0A specification

#### 4.1 USPSMIDCreateRequest

The purpose of this message is to send a request for creating Mailer ID

##### Prerequisites

- Mailer requests the creation of one or more MIDs.
- Mailer passes in the following information at a minimum per MID requested (information must be repeated for each MID requested):
  - o CRID
  - o ApplyingForSelf
- The *PostalOne!* system will provide feedback to the mailer using USPSMIDCreateResponse Message

##### If successful:

- Response is returned to mailer
- Response will include per MID requested:
  - o One 9-digit MID if newly created
  - o One or more MIDs if existing

##### If not successful:

- Response is returned to mailer:
- Response will indicate the problem per MID requested

##### Business Rules

For each USPSMIDCreateRequest message, the customer needs to provide the information for all of the required blocks.

- Submitting Party
- Submitting Software
- SubmitterTrackingID

The *PostalOne!* system for each Mail.XML message submitted uses the combination of message name, the SubmitterTrackingID, User ID, and the Mail.XML application generated variables of TrackingID and RequestReceived to check if the message has already been processed in the last 45 days. If the message was already processed then the *PostalOne!* system shall consider the request as a duplicate request and in this case the system shall send the Response that was processed for the previous request. In this case the system adds a Warning message in the Accept block notifying the submitter that the request was a duplicate request.

The *PostalOne!* system will implement the new identifier “SubmitterTrackingID” that will be made part of all Mail.XML Request headers. This SubmitterTrackingID allows for the submitter of the request to uniquely identify one message from the other and to assist with identifying duplicate requests. The system shall handle this process for all Mail.XML Request messages including messages for eDoc, FAST, Data Distribution and MID/CRID generation.

- Customer CRID
- Customer Name (Optional)
- Optional to provide Permit Info
- Company HQ Indicator – The accepted values are ‘Yes’ or ‘No’ (Optional)
- Address Information (Optional)

- Sequence Number (Optional)
- Applying for Self Indicator. Accepted values are ‘Yes’ or ‘No’ – Required
- Legal Acknowledgment - Legal Acknowledgment Block required when Applying For Self Indicator is “No.” This block requires the following info:
  - o UnderstandLegalLiabilityForApplyingForSomeoneElse
  - o AcknowledgementNotifyingTheMailOwner
  - o USPSLegalAgreement

## 4.2 USPSMIDCreateResponse

The message is sent by USPS to customer in response to MID Create request

**Prerequisites**

- Mailer requests the creation of one or more MIDs.
- Mailer passes in the following information at a minimum per MID requested (information must be repeated for each MID requested):
  - o CRID
  - o ApplyingForSelf
- The *PostalOne!* system will provide feedback to the mailer using USPSMIDCreateResponse Message

**If successful:**

- Response is returned to mailer
- Response will include per MID requested:
  - o One 9-digit MID if newly created
  - o One or more MIDs if existing

**If not successful:**

- Response is returned to mailer
- Response will indicate the problem per MID requested

**Business Rules**

The USPSMIDCreateResponse message returns one of the two messages block i.e. MID Accepted or MID Reject Block.

- In ACCEPT block
  - o Returns all of the data blocks/elements that were sent in the USPSMIDCreateRequest message AND
  - o MID information, which is either MID6 or MID9 AND
  - o OPTIONAL return info block that contains return code and return description
- in REJECT block
  - o Returns all of the data blocks/elements that were sent in the USPSMIDCreateRequest message AND
  - o REQUIRED return info block that contains return code and return description to communicate the issue

### 4.3 USPSCRIDCreateRequest

The purpose of this message is to send a request for creating Mailer CRIDs

#### Prerequisites

- Mailer requests the creation of one or more CRIDs using USPSCRIDCreateRequest Message.
- Mailer passes the required information per CRID requested
- The *PostalOne!* system provides feedback to the mailer using USPSCRIDCreateResponse Message

#### If successful:

- Response is returned to mailer
- Response will indicate whether the included CRID is new or existing
- There will always be exactly one CRID returned for a given CRID requested

#### If not successful:

- Response is returned to mailer
- Response will indicate the problem per CRID requested

#### Business Rules

For each USPSCRIDCreateRequest message, the customer needs to provide the information for all of the required blocks.

- Submitting Party
- Submitting Software
- SubmitterTrackingID

The *PostalOne!* system for each Mail.XML message submitted uses the combination of message name, the SubmitterTrackingID, User ID, and the Mail.XML application generated variables of TrackingID and RequestReceived to

check if the message has already been processed in the last 45 days. If the message was already processed then the *PostalOne!* system shall consider the request as a duplicate request and in this case the system shall send the Response that was processed for the previous request. In this case the system adds a Warning message in the Accept block notifying the submitter that the request was a duplicate request.

The *PostalOne!* system will implement the new identifier “SubmitterTrackingID” that will be made part of all Mail.XML Request headers. This SubmitterTrackingID allows for the submitter of the request to uniquely identify one message from the other and to assist with identifying duplicate requests. The system shall handle this process for all Mail.XML Request messages including messages for eDoc, FAST, Data Distribution and MID/CRID generation.

- Company Name
- Permit Publication Block (Optional) that must provide information for the following required elements:
  - o Permit Number and PermitZip4 OR
  - o Publication Number
- Company HQ indicator. The accepted values are ‘Yes’ or ‘No’
- Address Information block that must provide information for the required elements. Only AMS matched addresses will be processed for CRIDs. Mailers are requested to verify if the addresses are cleansed and can be matched in the AMS system.
  - o Address 1
  - o City
  - o State
  - o Zip Code
- Address Match Indicator. The accepted values are ‘Yes’ or ‘No’
- Applying for Self indicator. The accepted values are ‘Yes’ or ‘No’
- Legal Acknowledgment block is required when ‘Applying for Self’ indicator is No. The block requires following information
  - o UnderstandLegalLiabilityForApplyingForSomeoneElse. The accepted values are ‘Yes’ or ‘No’.
  - o AcknowledgeNotifyingTheMailOwner. The accepted values are ‘Yes’ or ‘No’
  - o USPSLegalAgreement. This field contains the USPS legal agreement by default.

## 7. WSDL Reference Information

**Note:** USPS no longer supports string-type WSDLs.

The WSDL specification is posted on RIBBS® and can be downloaded from the following location:

[https://ribbs.usps.gov/intelligentmail\\_guides/documents/tech\\_guides/xmlspec/wsdl/wsdl.htm](https://ribbs.usps.gov/intelligentmail_guides/documents/tech_guides/xmlspec/wsdl/wsdl.htm)

The preceding RIBBS® URL provides WSDLs for both the TEM and Production environments. Use this link to access the most current versions of the WSDLs.

## 8. Change History Archive

### Changes for Mail.XML MID-CRID-12.0A-R20 Edition 3 Change 0

Date	Section #	Title	Description
6/3/15	Various	N/A	Updated footer, TOC, & cover page to reflect final publication date and edition.

### Changes for Mail.XML MID-CRID-12.0A-R20 Edition 2 Change 0

Date	Section #	Title	Description
3/12/15	Various	N/A	Updated footer & cover page to reflect current edition and publication date.

### Changes for Mail.XML MID-CRID-12.0A-R20 Edition 1 Change 0

Date	Section #	Title	Description
2/23/15	Various	N/A	Updated footer & cover page to reflect current edition and publication date.
2/23/15	1.5	Roadmap of Mail.XML	Updated for April 2015 release.
2/23/15	1.2.1	Document Scope	Updated section.

### Changes for Mail.XML MID-CRID-12.0A-R19 Edition 4 Change 0

Date	Section #	Title	Description
1/29/15	Various	N/A	Updated footer & cover page to reflect current edition and publication date.
2/4/15	Various	N/A	Minor grammar edits. Corrected header.

### Changes for Mail.XML MID-CRID-12.0A-R19 Edition 3 Change 0

Date	Section #	Title	Description
12/9/14	Various	N/A	Updated footer & cover page to reflect current edition and date.
12/9/14	5.9	Complex Type: SubmittingParty, participantIDType	Corrected typo in MailerID6 row.

### Changes for Mail.XML MID-CRID-12.0A-R19 Edition 2 Change 0

Date	Section #	Title	Description
11/20/14	Various	N/A	Updated footer & cover page to reflect current edition and date.

### Changes for Mail.XML MID-CRID-12.0A-R19 Edition 1 Change 0

Date	Section #	Title	Description
11/14/14	Various	N/A	Updated footer, cover page, and road map to reflect current release, version, & publication date. Corrected typos.
11/14/14	6	Simple Type: ApplyingForSelf	Corrected "EnrollingForSelf" to "ApplyingForSelf"

### These are the changes to Mail.XML MID-CRID-12.0A-R18 Edition 4 Change 0

Date	Section #	Title	Description
8/25/14	Various	N/A	Updated footer, cover page, road map to reflect Edition 4 publication date

Date	Section #	Title	Description
8/27/14	1.4	Mail.XML	Updated hyperlink

**These are the changes to Mail.XML MID-CRID-12.0A-R18 Edition 2 Change 1**

Date	Section #	Title	Description
7/30/14	Various	N/A	Updated footer, cover page, road map to reflect Edition 2 publication date of August 1 and release deployment date of November 2014.

**These are the changes to Mail.XML MID-CRID-12.0A-R18 Edition 2 Change 0**

Date	Section #	Title	Description
6/25/14	Various	N/A	Updated TOC, footer, cover page

**These are the changes to Mail.XML MID-CRID-12.0A-R18 Edition 1 Change 1**

Date	Section #	Title	Description
5/21/14	Various	N/A	Updated for release date change from July to August 2014

**These are the changes to MID-CRID-12.0A-R18 Edition 1 Change 0**

Date	Section #	Title	Description
5/14/14	Various	N/A	Updated cover page, Table of Contents, footer
5/14/14	1.5	Roadmap of Mail.XML	Added column for October 2014 release

**These are the changes to MID-CRID-12.0A-R17 Edition 2 Change 2**

Date	Section #	Title	Description
2/26/14	1.9	Profile Management	Modified wording to remove references to “unassociated” Full Service ACS profiles

**These are the changes to MID-CRID-12.0A-R17 Edition 2 Change 1**

Date	Section #	Title	Description
2/25/14	Intro page	N/A	Removed April 2013 from release version support list
2/25/14	1.5	Roadmap of Mail.XML	Removed column for April 2013
2/25/14	7	WSDL Reference Information	Renamed section to remove reference to XSD

**These are the changes to MID-CRID-12.0A-R17 Edition 2 Change 0**

Date	Section	Title	Description
2/18/14	3.4	Fault Codes	Replaced fault code table with updated codes (Table 3-3)
2/18/14	Cover page, footer, Table of Contents, Index	N/A	Updated date, edition Updated Table of Contents & Index after section modifications

**These are the changes to MID-CRID-12.0A-R17 Edition 1 Change 2**

Date	Section	Title	Description
1/16/14	N/A	Intro page	Corrected ACS designation from ® to ™

**These are the changes to MID-CRID-12.0A-R17 Edition 1 Change 1**

Date	Section	Title	Description
1/15/14	All	Entire document	Minor spelling / grammar corrections

**These are the changes to MID-CRID-12.0A-R17 Edition 1 Change 0**

Date	Section	Title	Description
1/2/14	Header, Footer	Entire Document	Updated publication date, copyright date, and edition number

**These are the changes to MID-CRID-12.0A-R16 Edition 3 Change 0**

Date	Section	Title	Description
11/5/13	Header, Footer	Entire Document	Updated publication date and edition number

**These are the changes to MID-CRID-12.0A-R16 Edition 1 Change 0**

Date	Section	Title	Description
07/16/2013	All	Entire Document	Derived from MID-CRID-12.0A-R15 Edition 2 Change 0

**These are the changes to MID-CRID-12.0A-R15 Edition 2 Change 0**

Date	Section	Title	Description
6/4/2013	All	Entire Document	Reformatted document with narrower margins and improved version tracking.
6/3/13	All	Entire Document	Grammatical and language edits.

**These are the changes from Mail.XML 12.0A MID-CRID Version 9.0 to Mail.XML 12.0A MID-CRID Version 10.0**

Date	Section #	Title	Description
3/20/13	Section 7	WSDL	Replaced WSDL information with RIBBS WSDL link
3/20/13	1.6	Hyperlinks	Made XML and XSD URL's hyperlinks
3/20/13	4.1,4.3	Verbiage	Updated wording of Legal Acknowledgment Block in 4.3 to the same as in 4.1 and added closing quotation mark
3/20/13	7	Section 7	Inserted Page Break
3/1/13	All	Header and Footer	Updated footer with correct version number and publication date

**These are the changes from Mail.XML 12.0A MID-CRID Version 8.0 to Mail.XML 12.0A MID-CRID Version 9.0**

Date	Section #	Title	Description
2/27/13	Throughout		Updated footer with correct version number and publication date
2/27/13	2.2.2	Process	Used consistent capitalization when repeating terms within a section (#3: production vs. Production)
2/27/13	4	Data Structure and Business Rules for Mail.XML 12.0A Specification	Used consistent capitalization when repeating terms within a section (all: optional vs. Optional)
2/27/13	3.2	Profile Management Messages Workflow	Fixed spacing
2/27/13	Throughout		Ensure proper usage of "the PostalOne! system"
2/27/13	4.3	USPSCRIDCreateRequest	Removed colon at end of first bullet point (following "mailer") under "If not successful"
2/27/13	4.4	USPSCRIDCreateResponse	Removed colon at end of first bullet point (following "mailer") under "If not successful"
2/20/13	7	Section 7-WSDLs & XSDs	Update Appendix with relevant WSDL Identification Information
2/20/13	1.5	Roadmap table	Modify roadmap table to add appropriate row for July and identified relevant versions

**These are the changes from Mail.XML 12.0A MID-CRID Version 7.0 to Mail.XML 12.0A MID-CRID Version 8.0**

Date	Section #	Title	Description
1/30/13	All		Checked fonts consistency throughout the document
1/30/13	All		Ensured proper usage and formatting of “the <i>PostalOne!</i> system” throughout the document
1/17/13			Assigned a new style to the document
1/17/13			Updated the front page to include Release 35 as a new release support Mail.XML 12.0A for MID-CRID functionalities
1/17/13		Index	Inserted and Index section at the end of the document

**These are the changes from Mail.XML 12.0A MID-CRID Version 6.0 to Mail.XML 12.0A MID-CRID Version 7.0**

Date	Section #	Title	Description
11/26/12	1.4	What is Mail.XML?	Update the Sec 1.4, top of page 13, first sentence of second paragraph Section 1.4 to break it into two shorter sentences.
11/26/12	1.5	Roadmap of Mail.XML	Marked the “new” versions shown in the table with a double asterisk for the release in which they are first implemented
11/26/12	1.9	January 2012 Release New Features	Added section 1.9 to outline the features first implemented in January 2012.
11/26/12	4.2	USPSMIDCreateResponse	Revised the TrackingID row in table to remove the word “again” from the Business Rules column to remove the redundancy in “requering again”

**Following are the changes from Version 1.6.5 to Version 1.6.6**

Date	Section	Title	Description
10/31/2011	All		Replaced Mail.XML 11.0B with Mail.XML 11.0D because 11.0D is the version planned to be implemented and supported for the January 2012 Release.

**Following are the changes from Version 1.6.4 to Version 1.6.5**

Date	Section	Title	Description
09/29/2011	All		Changed the number of CRID and MID requests to be sent at a time from fifty (50) for both to twenty (20) for CRID and two (2) for MID for more efficient processing of the request.
09/29/2011	2.0	MID and CRID Application Process	Added Note2: The MID and CRID systems are extremely slow. It is therefore recommended to send CRIDs and MIDs in groups of twenty (20) CRID or two (2) MID requests. If the systems are not able to process the request within ten (10) seconds, a fault response is returned to the user with a Tracking Id that the user can use to retrieve the response at a later time.
09/29/2011	All		Replace Mail.XML 11.0A by Mail.XML 11.0B since 11.0B is the version planned to be supported for January 2012 release

**Following are the changes from Version 1.6.3 to Version 1.6.4**

Date	Section	Title	Description
